

HPLC Analysis of Cannabinoids using Ascentis® Express RP-Amide

The rapid growth of the cannabis testing market has prompted the development of equally rapid methods to analyze the active ingredients. Shown here is the separation of cannabis compounds on an Ascentis Express RP-Amide column. The selectivity, and therefore resolution, is unique to the amide bonded phase chemistry. Fluka LC-MS Ultra CHROMASOLV solvents were used to supply low background interference and low particulate contaminants for robust, trouble-free operation. Cerilliant CRMs provided reliable identification and quantification.

market focus	Forensics and Toxicology
column	Ascentis Express RP-Amide, 15 cm x 4.6 mm I.D., 5 µm particles (50774-U)
mobile phase	5 mM ammonium acetate (pH 4.5 with acetic acid) in 20:80, acetonitrile:water
flow rate	1.0 mL/min
pressure	1450 psi (100 bar)
column temp.	35 °C
detector	UV, 214 nm
injection	5 µL
sample	4 cannabinoids 50 µg/mL 50:50, water:methanol
Application No.	G006303
